

**For Immediate Release**

CFI will see the arrival of a new piece of equipment this week. A ball mill – which is used to grind and blend materials – was shipped to facilities over two deliveries. CFI will use the mill to prepare fluorspar concentrate for sale and shipment. Measuring 14 feet high by 14 feet wide, the mill shells are set to arrive Monday while the head feed and discharge head arrived this morning.

The equipment delivery has been rescheduled for Tuesday morning.

CFI would like to thank the citizens of St Lawrence for making it possible to have a smooth delivery of our feed head and discharge head that took place this morning. The mill shells and the heads are the first of 15 loads for the Mill however they are the largest at 14 feet diameter.

*Canada Fluorspar (NL) Inc. (CFI), a company 100% owned by Golden Gate Capital, is developing the AGS Project in St. Lawrence, Newfoundland and Labrador, Canada. CFI will mine high quality fluorspar ore from the AGS Vein, produce acid-grade fluorspar concentrate, and export the product to domestic and international markets.*
